Collection 2024

When elegance meets rustic nonchalance and nautical style meets La Dolce Vita in a stylish, feel-good atmosphere with a solid practicality – and the choice is yours!

The MY FLOOR Collection 2024 unites elegant design and the authentic look of real wood with the advantages of a top-quality, modern laminate floor. It is tough, low-maintenance and durable. Whether you prefer the feel of life by the sea or the urban elegance of a town house, MY FLOOR has just the floor to make you feel good, without compromise on quality or appearance.

Our decors are original and, in the truest sense of the word, sublime. The different surface structures promise variety. Our decorative imprints create an authentic wood-look which is second to none. All floors from MY FLOOR are extremely durable and have the highest abrasion class rating.

For the sake of the environment, we source our wood from sustainable forests. All of our products are made from natural, renewable raw materials and low-pollution wood-based materials. We keep the manufacturing chain lean and efficient: our energy management is certified and particularly resource-saving.

And now: you can enjoy the new MY FLOOR Collection 2024 and be inspired by our living styles.

Chalet

CASTLE

Villa

Residence

Our moisture protection

We have made the best even better: high-quality décors from the Chalet, Castle, Villa and Residence laminate collections have been optimised in order to withstand moisture penetration even longer. The resin-rich pine from Mark Brandenburg forest and special gluing processes ensure significantly reduced swelling of the laminate flooring.

The natural product is particularly suitable for children and pets who are in frequent contact with the laminate flooring. It can easily forgive a mishap or two.

Laminate flooring is usually to be cleaned by means of a damp wipe.
The floors with moisture protection can be easily cleaned with a damp mop.

Like all wood-based products, this laminate flooring will react to the moisture and expand or contract accordingly. Although designed for improved resistance to water and moisture, it is not waterproof and excessive wetting and standing water should be avoided.

Suitable for rooms with high humidity.

Not suitable for outdoor areas, rooms with permanently high moisture load, e.g. shower cubicles, saunas and rooms with floor drains.

An eye for detail and the big picture

Conrad Huhn has been at SWISS KRONO TEX for almost 30 years and as Flooring Production Manager, he and his team ensure that production runs smoothly in the manufacture of MY FLOOR floors. He gave us a brief glimpse of his average day:

As Production Manager, you must have a lot to coordinate and so much to keep an eye on. What does this all consist of for you?

We produce between 170,000 m² and 215,000 m² of floors every day; that's an impressive quantity of ecologically sustainable floors for healthy living. 7 floor production systems alone have to be coordinated for the various products. Added to this, there is tool management and tool technology. In addition, goods inwards and inventory management for semi-finished and finished goods must of course be monitored. Our team consists of 130 employees. As a result, everything is very well coordinated.

There's a fairly broad range of different laminate flooring – MY FLOOR alone has 6 different collections of varying lengths, thicknesses and widths. How do you manage the many different orders from all round the world?

The available capacity required to supply our customers has to be continuously coordinated with Sales. The major task is to find a cost-effective balance between the needs of customers and the optimisation of processes. It's a constant challenge not to lose the necessary flexibility, and this keeps us on our toes. By optimising processes, we were able in the last few years to steadily boost the efficiency of the 7 floor production systems.

Every one of our 7 floor production systems has its specific technical characteristics – e.g. specialising in entry level products up to 8 mm or suitable for additional product finishing with footfall sound insulation film, products with and

“ The daily variety and new challenges associated with the development of new technologies and man management are exciting. It's gratifying to be able to pass on my accumulated experience.

Conrad Huhn

without V-shaped joints, special varnish or for especially thick, long or wide panels, etc. This enables us to respond quickly and flexibly to different customer requests and orders and to offer such a large variety of floors.

So what production steps are required to make a panel?

Round timber from sustainably managed forests is processed into wood fibre and then pressed to form high-density fibreboard (HDF) using a small amount of formaldehyde-free adhesive. The decor is either attached to this substrate or printed directly onto it. Then the panel is sealed with melamine and given a surface texture. These large-format, semi-finished products are then cut to blanks on the panel saws. The profile is then milled to the specified length and width with a special varnish applied to the edge to match the decor, and, if necessary, the floor is given footfall sound protection – depending on the product.

There's a nice illustration of the structure of a panel at the end of this brochure. The automated quality control of the panels is of course very important at the end, before they are packaged.

And now for a few more figures please: What can your floor production systems manage per month on average?

On all 7 of our floor production systems, the material is changed 950 times a month and the decor 690 times. The thickness is changed 50 times a month, the colour of the V-shaped joint 250 times and the profile 23 times. So there's no danger of boredom setting in with us.

And without compromise to the environment!

MY FLOOR has made a voluntary commitment to full transparency. This means that we take the environmental sustainability of our products as seriously as maintaining the highest standards of quality and giving outstanding value for money.

Our environmental policies focus on ecological efficiency – for the whole life cycle of any given product that leaves our factory. We process certified raw materials sourced from sustainably managed forests and check the environmental impact of every stage of production. We produce high-quality and very long-lasting laminate flooring, and also take care of eco-friendly disposal. Our Environmental Product Declaration (EPD) makes information on the environmental credentials of our wood-based products freely available. The EPD is awarded by the Institut Bauen und Umwelt and is an internationally recognised ecolabel in accordance with ISO 14025.

And because we want to keep things this way, we give our staff regular training in awareness and knowledge of environmental matters. We are always striving for better – for you and for our environment. As a result, we are proud to have been awarded Blue Angel environmental certification.

Lodge

Waves rushing. Fresh sea air surrounds you. The sun warms the tip of your nose. Immediately you begin to relax ... Bring that beach holiday feeling into your home with the MY FLOOR Lodge Collection.

The decors in the Lodge Collection look natural and rustic. They exude pure love of life. As free and happy as a day at the beach. Whether light, dark or casual tile design, our designs are extremely diverse. Finding it difficult to make up your mind? Even better, our decors can also be easily combined and harmonise perfectly with one other.

COTTAGE

A glass of wine, a good book, a cosy fire crackling in the fireplace. What more do you need for a peaceful end to the day? The flickering of the fireplace bathes the room in a beautifully warm light. Your new floor from the MY FLOOR Cottage Collection shimmers subtly and its embossed grain is fine and elegant. This will make you long for the evening, every day anew ...

All Cottage Collection floors exude an incomparable sense of comfort and are full of character. An effect that could only be matched by solid wood floors. And, if a small spark jumps out of the fire, it's no problem at all. Our laminate floors are flame-retardant and hard-wearing.

Our decor of the year 2024

Gnarrenburg Oak Nature – MV8116

A cosy home that you won't want to leave: That's what our MY FLOOR Cottage collection creates. Its shooting star is definitely Gnarrenburg Oak Nature. Our decor of the year creates an incomparable cosiness. You can almost hear the fire crackling in the fireplace and see this floor shimmering matt in the warm light. Can you feel a sense of relaxation enveloping you?

Gnarrenburg Oak Nature is also a true chameleon. The warm colours of the high-quality natural flooring in an authentic real wood look alternate between various shades of beige and brown, interspersed with a soft grey textured embossing. Just like a varied landscape, you will certainly not be able to get enough of it.

Chalet

Do you love the rustic alpine atmosphere? Up there in the mountains, everything seems just that bit easier and more original. Enjoying a hearty snack after a long hike. Telling stories until late in the evening and even enjoying a vigorous "Schuhplattler". The high-quality floor from the MY FLOOR Chalet collection takes it all in its stride. It is tough, hard wearing and even forgiving of dancing on the parquet, erm – laminate.

The decors of the Chalet Collection also create a rustic ambience in your home. Combine it, for example, with simple wood furniture, linen and leather, or dare to try an atmospheric mix of antique and modern furniture.

CASTLE

Discover a new elegance of living. With Castle in the characteristic herringbone look, a touch of the Wilhelminian style finds its way into the modern home. The trendy floor with the innovative installation technique also transforms your living space into an inviting foyer. Available in a variety of shades, Castle can be combined with almost any interior style, adding a light-footed nuance of art deco to even the most minimalist ambience.

With Castle we have a completely new presentation and installation form for the experienced Do-it-yourself application. The easy to handling two-piece set makes laying an elaborate-looking floor covering easier than expected, also thanks to modern CLIC system.

Villa

The villa has been perched on the small Tuscan hill for several centuries. It has seen a lot during this time: happy family celebrations, opulent dinners and romantic candlelight dinners. Its style has hardly changed over time – it has always been timelessly elegant. The MY FLOOR Villa Collection combines this classic elegance with understated glamour that effortlessly enhances every room.

Do you value exclusive quality? Allow yourself to be seduced by the noble wood look of the Villa Collection and create your own space with its stylish beauty. And don't forget that it also makes an impressive statement in a business setting.

Residence

Say goodbye to the mundane. You will create an extraordinary ambience with our highlight: urban, stylish and graceful at the same time. Residence is our very special collection, our masterpiece. The extra wide and unusually long panels; the authentic, elegant, natural wood look and the excellent quality of this floor speak all for themselves.

Our MY FLOOR Residence Collection will thrill you. It lies in your room, exuding self-confidence, modernity and exclusivity. You won't just walk across the floor, no, you'll swagger. It goes without saying that the floors are robust, not light-sensitive and comfortable to walk on.

Panel construction

The panels for our laminate flooring are made up of at least four sturdy layers. These guarantee the durability and excellent quality of MY FLOOR. This is how we create long-lasting floors for all requirements.

- A** The upper surface of the flooring features a particularly wear-resistant overlay protection film.
- B** The overlay protection film is pressed together with the individual, hardened decorative film to form a hard-wearing surface.
- C** The base layer is a wood fibreboard.
- D** On the underside of the base board, a moisture-resistant stabilisation film ensures the structural stability of the MY FLOOR laminate flooring.

The CLIC system makes laying this floor child's play: with just one finger, panels lock audibly into place. Simply unpack, lay, click and finish – without the least exertion or any additional tools.

- ✓ even easier to lay
- ✓ 50% time saving
- ✓ no hammer, push block or pull bar required
- ✓ safe and robust
- ✓ can be walked on immediately

For more laying tips, we recommend our YouTube videos at ► [video.my-floor.com](https://www.youtube.com/watch?v=video.my-floor.com)

AC 5/32 A laminate floor's resistance to wear is given as an abrasion class, e.g. AC 5. Here, the number 5 indicates that it will not show signs of abrasion for a considerable length of time. The wear class figure indicates the level of use for which the laminate is suitable.

AC 5/33 32 represents average commercial use and 33 is for heavy commercial use.

Floors with these symbols have the following properties:

All floors use the CLIC system. Simple to lay with no need for a hammer, tapping block and crowbar. Safe and stable, you can walk on them right away.

These panels have a 45° bevelled edge all the way round. Putting them together creates a V-shaped groove, which replicates the character of natural wooden floorboards.

Fast installment thanks to an easy-to-use interlocking system for the long and short sides of the boards.

These panels have a special surface structure.

Decors with this symbol are antistatic.

Decors with this symbol have got a special Moisture Guard.

Outstanding features of all MY FLOOR products:

Low flammability.

Highly resistant to cigarette butts.

Stain-resistant.

Comfortable to walk on.

Easy-care and durable.

Not light-sensitive.

Resistant to wear.

Suitable for use over underfloor heating.

Made from natural, renewable materials.

Hard-wearing and pressure resistant.
