/ TECHNICAL INFORMATION

JOINTING:

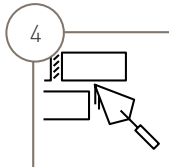

For products that require jointing use MODULO / PARMUR JOINT 24 hours after installation.

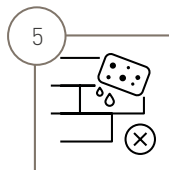

Prepare the grout according to the instructions on the package, cut the corner of the joint bag ($\pm 1-2$ cm), fill the bag halfway and, pressing gently, fill the spaces between the tiles, keeping the tip of the bag in contact with the wall.

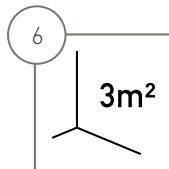

Fill the joints according to the desired joint style. Average joint mortar consumption may vary accordingly.

If the mortar spills over the tiles, allow it to harden first and then remove it at the end. It is not recommended to clean the tiles with a metal brush or a wet sponge, as you risk damaging or staining the product.

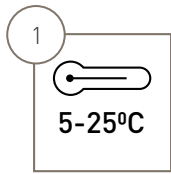

From the moment the grout starts to harden (30 to 120 minutes, depending on the ambient temperature and the product used), scrape the surface of the grout with a spatula. The joints can be evened out with a rubber/plastic hose or levelling iron for a smooth look, or with a soft bristle brush for rustic-looking joints.

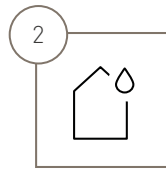

It is recommended to work on surfaces of approximately 3 sqm at a time.

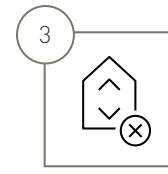

RECOMMENDATIONS:

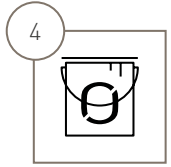

1 Temperature of the support during application: between 10 °C and 30 °C, depending on the adhesive.

2 Protection against water leaks over the product (roofs, canopies, flashings).

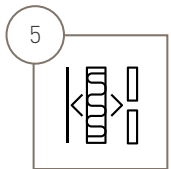

3 The products should not be installed on the floor or ceiling.

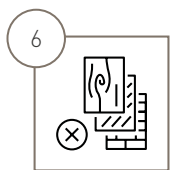

4 Follow the installation instructions of the used adhesive. For large outdoors areas or on exterior façades higher than ground floor we recommend C2S1 class adhesives. For the best result, we recommend:

- for interior use products: MODULO Adhesive (D2) on a cement-based support (concrete, rendered/plastered walls) or a primed absorbent support (fibre cement, plasterboard, ACC masonry, plaster/stucco, wood panels – MDF, OSB).
- for exterior/interior use products: outdoors with MODULO COLLE EXTRA FLEX (C2TeS1) on a cement-based support (concrete, light/porous concrete, cement based renders, cement and lime based renders, cement based waterproofing mortars, etc.) or MODULO Adhesive (D2) on a cement-based support (concrete, rendered/plastered walls) or a primed absorbent support (fibre cement, plasterboard, ACC masonry, plaster/stucco, wood panels – MDF, OSB).

5 When installing on insulation boards with a thickness of up to 10 cm (polystyrene or rigid mineral wool), it is recommended to:

- choose an adhesive for thermal insulation boards with high performance;
- the number of wall anchors (with metal nails) should be at least 8 pcs./sqm (in the case of reinforced concrete walls) or 10 pcs./sqm (in the case of masonry walls);
- and the reinforcing mesh for the render must have a minimum density of 330 g/sqm (or optionally, additional welded metal mesh can be used for the adequate reinforcement of the rendering);
- for thermal insulation boards thicker than 10 cm, we recommend seeking the advice of the insulation board manufacturer.

6 The products should not be installed on surfaces or in areas with high humidity, or exposed to temperatures higher than 40 °C (for interior use products) or 70 °C (for exterior/interior use products).

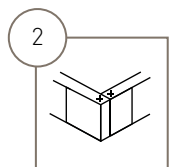

Make sure that the supporting surface on which you will mount the tiles is stable, flat, dry, dust-free, degreased, in good condition (without any traces of paint, wallpaper, etc.) and protected against water infiltration.

Freestanding walls, wall base plinths, parapets, etc. can represent high risk surfaces for exterior/interior use products from the Signature range. Adequate waterproofing measures should be taken.

PREPARATION:

1 We recommend that you purchase the entire quantity of wall cladding required for your project and mix the pieces from several boxes for a harmony of shades.

2 It is recommended to draw a sketch with the number of rows and the desired weaving, taking into consideration any openings or volumetric features of the installation area. Corner tiles should be installed first, to avoid unaesthetic cuts.

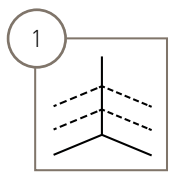

3 Please consult the catalogue about the availability of corners for the chosen product.

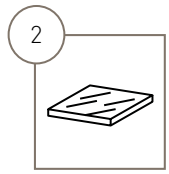

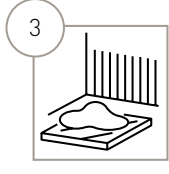

4 Certain products have a 2-piece corner available. The pieces combine in such a way that the design continues smoothly from one tile to the other. To make them easier to match, every pair has a marking on the side of both pieces. The markings should be facing the same way, either up or down.

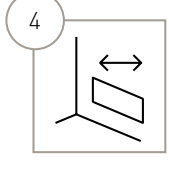

/ TECHNICAL INFORMATION

INSTALLATION:

- 

1 Mark the area with horizontal lines, for every second row of product (considering joint height, if applicable). It is recommended to use a level to ensure you get the best result.
- 

2 Smooth the edges, if necessary, with a file and scrape the back of the decorative tiles with a wire brush or file, for better adhesion. Make sure the back of the tiles is clean and dust free. We recommend mounting the product starting from the bottom of the installation area.
- 

3 Apply the adequate adhesive on the back of the tiles. For exterior/interior use products, it is mandatory to apply the adhesive both on the back of the individual piece, as well as on the support, in a continuous bed. We recommend a trowel with 3-4 mm teeth for levelling the adhesive.
- 

4 Apply the product to the wall using a lateral back-and-forth motion. For products that are installed with joints, leave the recommended distance between the tiles. Please consult the product details table below for specific joint sizes.
- 

6 For products that require jointing, follow the jointing instructions.
- 

7 Optionally, we recommend using a protection solution as per the maintenance instructions below.

MAINTENANCE:

- Use only neutral pH solutions to clean the tiles.
- Do not clean the tiles using high-pressure washers.
- Clean the tiles with a vacuum cleaner but avoid direct contact of the nozzle with the wall cladding.
- In case of light scratches on interior use products, dab with a lightly dampened cloth to even out the surface colour.
- In the case of exterior/interior use products, we recommend the MODULO Cleaner For Dust & Stains to remove difficult stains.
- For deep stains, seek professional advice. Beware of non-specific cleaning products.
- In the case of "exterior/interior" products, we recommend the MODULO Cleaner For Dust & Stains detergent to remove difficult stains.
- To protect the products from water or oil splashes, we recommend using MODULO Protection Spray. Moreover, exterior/interior use products can be protected using MODULO Surface Protector Natural Effect, or MODULO Surface Protector Wet Effect, which accentuates the colours of the products.
- Products from the Signature range are an exception, as they should not be additionally treated.

The application of other types of protective solutions of any kind, including varnishes, besides those recommended by MODULO, is inadvisable.

Any installed product is considered accepted.

The manufacturer guarantees the replacement of the product, subject to compliance with the MODULO installation instructions.
